SQL Server

PostgreSQL

MySQL

MongoDB

Git

PROFILE

Hello, I am trying different technologies in different fields. I enjoy solving challenging problems. I also dealt with artificial intelligence, then I focused more on web technologies. When an opportunity arises, I would love to deal with it.

My main goal is to develop myself independently of the language. Whatever I do, I want to do my best. I am trying to improve myself not only technically, but also in my managerial direction. For this, I am both the manager and software developer of my own projects.

EDUCATION

Bachelor of Engineering - Sakarya University

Sakarya, Turkey

Mechatronics Engineering

Sep 2017 — Sep 2022

EMPLOYMENT HISTORY

Freelance Software Counselor

Sakarya, Turkey

October 2021 - January 2022

I have given many consultancy services to the software development teams of the technology companies in Sakarya. I have given consultancy about the software they use with the software team about many things I have learned, such as **Software Architecture, Clean Code, Design Pattern, Web Test Automation(Selenium, Cucumber.io)** for the software of the Sakarya University of Applied Sciences.

Back End Developer - Codefirst.io

Turkey

February 2021 - October 2022

Together with the Codefirst team, we were providing software as a service to many big technology companies such as Turk Telekom and Turkcell. I helped realize projects such as Cloud Automation, Task Management Application, and we implemented these applications using up-to-date technologies such as **Angular, Java, Spring Boot, Hyperledger Fabric, PostgreSQL, Restful API**. In addition, in this process, we wrote the robin-hr.com Human Resources automation application as the company's own application.

Freelance Software Developer

Remote

May 2020 - February 2021

Due to the intensity of my classes, instead of working in a full-time company, I realized many freelance projects such as upwork, freelance, and especially from companies in Sakarya Teknokent. A significant part of these projects was Web Automation. In these projects, I worked with frameworks such as Cucumber.io and Selenium. In this process, I used the python software language a lot.

Intern - Dronmarket

Sakarya.Turkey

January 2019 - February 2020

In the R&D office of the Dronmarket company, I worked on autopilot systems such as DJI, Emlid, Navio and the software of concepts such as image processing and agricultural drones of these and these systems for 1 year. These software concepts were generally on embedded software technologies. In this process, OpenCV library was used. We used it in **Python,ArduPilot,OpenCV** .We also designed industrial drones with CAD-CAM programs.

Team Lead and Computer Vision Developer

Sakarya.Turkey

Sakarya University Robotics Society

January 2019 - February 2020

When I first joined Sakarya University Robot Society, we started working on a dome project. We wanted this drone to have VTOL features, then we turned our focus to Vision Processing because of the Teknofest competition, and by leading the team, I also developed Image processing.

H O B B I E S

Sakarya University American Football Team

Sakarya,Turkey

Sep 2017 — Currently

I have been playing Linebacker position for 5 years in Sakarya University American Football Team (Sakarya Tatankalar). Also, I have been training new players for 3 years.
